SUMMARY

Laravel developer who ships complete SaaS products end to end using an AI-first workflow built on Claude Code. Built three live production systems, including Ren.Bio, my own SaaS with 300+ users. I own architecture, data modelling and product decisions, and use Claude Code to move from spec to deployed feature fast, with every change reviewed before it ships. Ten years in Malaysian real estate means I build for real users and real business problems, not demos. Now focused full-time on software development and looking for a remote Laravel role on a team that treats AI-assisted development as a core skill.

CORE SKILLS

Backend	PHP, Laravel 11, Eloquent, REST APIs, queues & Horizon, Redis, payment gateway integration (CHIP)
Frontend	Filament PHP, Vue 3, Ionic, Capacitor (PWA / mobile), Tailwind CSS
AI	Claude Code (daily workflow), Anthropic Claude API, prompt engineering
Data	MySQL, schema and ERD design
DevOps	DigitalOcean, RunCloud, Cloudflare, Git / GitHub, production deployment
Product	PRDs, API docs, UI/UX specs, client scoping and quotations

EXPERIENCE & PROJECTS

Founder & Lead Developer — Sleekfunnel Digitech Services
2025 – Present · Malaysia (remote)

My own SaaS company. I design, build and run the products end to end, from idea through deployment and support.

SleekJunior — preschool & nursery management SaaS · sleekjunior.my May – Sep 2026
Laravel · Filament · Vue 3 + Ionic PWA · CHIP payment gateway

- Built a school management platform covering students, parents, attendance and admin workflows, live in production.
- Built QR code check-in and check-out so children's attendance is recorded instantly and parents can see it.
- Integrated the CHIP payment gateway (chip-in.asia) so parents pay school fees online, with payment callbacks handled in Laravel.
- Delivered a Filament admin panel for operators and an Ionic PWA for parents on mobile.

Ren.Bio — branding & listing SaaS for real estate agents · ren.bio Dec 2025 – Apr 2026
Laravel · Vue 3 · Ionic · Filament · MySQL · DigitalOcean · Cloudflare

- Built and launched a multi-user SaaS that gives Malaysian property agents a personal brand page and listing showcase; now 300+ users.
- Shipped a bilingual (English / Malay) AI help chat powered by the Claude API, scoped to product knowledge and served from Laravel.
- Integrated a Python scraping pipeline (Scrapling) to import listing data into the Laravel backend.
- Run production infrastructure on DigitalOcean + RunCloud behind Cloudflare, with Redis and Horizon for queued jobs.

Software Developer — Azbahri Technologies

Aug – Nov 2025 · Malaysia · azbahri.my

Client software projects for Malaysian businesses.

Maritime safety management platform — private client, confidential

Aug – Nov 2025

Laravel · Vue.js · MySQL

Built with one co-developer: a "zero-paper" platform that digitises paper-based ship and office operations for a marine services company; complete and in client use.

- **Operations & compliance** — digital shipboard checklists, emergency preparedness and a controlled Safety Management System (SMS) manual, replacing paper for ISM/SOLAS and Port State Control requirements.
- **Planned maintenance & spares** — hierarchical equipment tree (self-referencing parent/child model) with scheduled maintenance, linked to spare-parts inventory.
- **Access & alerts** — role-based permissions across departments, with automated email notifications for due tasks and approvals.

HOW I BUILD WITH AI

I use Claude Code as my daily engineering environment, with a spec-first process that keeps AI output reviewable and production-safe.

1. **Spec before code** — every system starts with a PRD, ERD, API doc and UI/UX spec, so Claude Code works from a clear contract.
2. **I own architecture** — I decide data models, boundaries and trade-offs; Claude Code implements against them in small, reviewable steps.
3. **Review and test** — I read every diff, run the app, and iterate until behaviour matches the spec.
4. **Ship and operate** — I deploy, monitor and maintain what I build in production.

PREVIOUS CAREER

Senior Real Estate Negotiator — IQI Realty Sdn Bhd

2014 – 2025

- Advised clients on residential and commercial property for over 10 years; this domain knowledge now shapes the proptech products I build.
- Built the client-facing skills I bring to software work: requirement gathering, proposals, negotiation and stakeholder management.

EDUCATION

Bachelor of Information Technology — Open University Malaysia — Expected 2029

Part-time · open & distance learning

Diploma in Information Technology — Multimedia University, Cyberjaya — 2013

LANGUAGES

English (professional) · Malay (native)
